Summary

Backend developer with over two years of experience on production systems. I currently support accounting automation systems at Ottimizza. Before that, I spent two years on a proprietary ERP at Lince Tech, focused on Java and SQL Server. I work mainly with Kotlin, Java, and Spring Boot, and also deliver front ends in React and TypeScript. Associate degree in Systems Analysis and Development from the Federal Institute of Santa Catarina (IFSC).

Experience

Ottimizza Automação Contábil | Junior Developer, maintenance team — **Feb 2026 to present**

- Fix bugs and support accounting automation systems in production, working from Jira and Salesforce tasks.
- Refactor legacy code and pay down technical debt, on both back end and front end.
- Diagnose production errors through logs in Elastic.
- Handle deploys and other routines on AWS; write technical documentation.

Lince Tech | Full-Stack Developer, Blumenau, Brazil — **Apr 2023 to Apr 2025**

- Built and supported a proprietary ERP in Java on the in-house XSeed framework, with screens rendered by the back end in HTML, CSS, and JavaScript/jQuery.
- Tuned SQL Server queries and routines to keep the system stable and fast.
- Automated data-checking routines, reducing manual work and operational errors.
- Built dashboards and statistical reports to track the ERP's KPIs.
- Agile methods (Scrum and Kanban), version control with Git and GitHub.

Projects

Routes & Pickups | personal project for a freight company, being rolled out
Pickups and trips: invoices read from a mailbox (IMAP), customer portal, phone-first driver area with photos and GPS, data isolated per company, and passwords encrypted with AES-GCM. (Kotlin, Spring Boot, Exposed, MySQL, React, TypeScript, Docker)

Complementary Hours | personal project for a school, being rolled out
Calculation and review of complementary activities based on a 15-page regulation: 16 documented rules, a calculation engine with 100% coverage enforced by the build, integration tests with Testcontainers, and privacy safeguards. (Kotlin, Spring Boot, Exposed, Flyway, MySQL, JUnit 5, MockK, Testcontainers, React)

Quem eu voto | open source, github.com/gustavo-domingos/quem-eu-voto
Election transparency with Brazil's open electoral and legislative data: a Go API with no database, multi-gigabyte zips read through HTTP Range requests, layers enforced by tests, and continuous integration. (Go, React, Docker, Caddy, GitHub Actions)

CRM Delice | capstone project, built as a team
CRM with a Zoho integration. My part: dashboard (endpoints and screens), filters, campaign creation, menu module, and standardized exception handling. (Kotlin, Spring Boot, Exposed, JWT, React, TypeScript, Docker)

Technical skills

Languages	Kotlin, Java, Go, TypeScript, JavaScript, SQL
Back end	Spring Boot, Exposed, Flyway, JWT, REST APIs and integrations
Front end	React, Vite, MUI, HTML, CSS, jQuery
Databases	SQL Server, MySQL
Testing	JUnit 5, MockK, Testcontainers, Vitest
Tools	Docker, Docker Compose, AWS, Elastic, Git and GitHub, GitHub Actions, Jira, Salesforce, Power Automate

Education

Associate degree in Systems Analysis and Development | IFSC, Gaspar — **Completed**

IT Technician, integrated with high school | IFSC, Gaspar — **Completed**

Java Spring Developer | complementary course, +Dev2Blu, Blumenau — **Completed**
